

The **ASHVINS Group** completes two projects centered on the development and verification/validation of Diabetes Data Management Software utilizing the cross-platform technology Qt and Ashvins' Quality System for FDA regulated software development. The two independent applications that each run on multiple OSs (both Win and Mac) were completed at the end of 2013 for a leading manufacturer of glucose meters and continuous glucose monitoring devices.

PRESS RELEASE

Diabetes Data Management Software: Cross-Platform Development and V&V

The ASHVINS Group, Inc. - Technology Professionals

<http://www.ashvinsgroup.com>

MIAMI FL. USA – January 11th, 2014. The **ASHVINS Group**, Inc., an Information Technology firm focused in project based consulting and staff augmentation, completes development and performs verification and validation (V&V) for Diabetes Data Management Software.

The project objective was to provide glucose monitoring device users with Windows and Mac applications that will allow them to track, trend, monitor and share critical diabetes related data. "The glucose monitoring device company is an innovative organization with advanced technology. We were proud to be selected to partner with them in the area of data management and develop an easy to use application for their customers that is based on cross-platform, single code base technology." said Lynn Hilt, President and CEO of ASHVINS Group, Inc. Working with the device company, Ashvins Group developed an overall data management system that is designed to conveniently interface the user's glucose monitoring device(s) and PC in order to allow patients to better manage their diabetes. The comprehensive graphical reports can also be shared with Healthcare Providers (HCPs) to facilitate disease management and increased communication between patients and HCPs.

Cross- platform application programming is a software development concept that allows you to write source code once and it can run identically on multiple operating systems such as in this case, Windows and Mac. Cross-platform applications originate from a single codebase which requires a single development skillset, resulting in reduced development and maintenance costs compared to native development/applications to support multiple platforms. Using cross-platform development technologies, applications can be developed to support the expanding platforms of interest for the medical device industry in a cost effective and time critical manner.

ABOUT ASHVINS GROUP

The **ASHVINS Group** serves both federal and commercial marketplaces by providing a variety of technology services including: staff augmentation, project management, requirements analysis, specification development, process/systems evaluation, systems design, implementation and integration, application development and verification/validation. Our projects range from technology consultation to Full Life Cycle Application Development. ASHVINS Technology Professionals' support also includes data collection interfaces, data analysis, database development, process automation and computer related systems validation. In addition, the company is skilled in software development, validation and compliance processes for FDA regulated environments (and HIPAA compliant applications).

Areas of ASHVINS' technical expertise include web based systems, Windows and Mac operating environments, mobile platforms and wireless technologies. The ASHVINS Group is a Certified Woman Owned Small Business and State of FL SBE. Visit our web site at www.ashvinsgroup.com for a summary of typical projects.
