

The **ASHVINS Group** presents "Cross-Platform Development; Target More Platforms and Devices with a Minimal Amount of Source Code" on March 11th 2013.

PRESS RELEASE

Cross-Platform Development; Target More Platforms and Devices with a Minimal Amount of Source Code
The ASHVINS Group, Inc.
Technology Professionals
<http://www.ashvinsgroup.com>

MIAMI FL, USA – March 11th, 2013. The **ASHVINS Group, Inc.**, an Information Technology firm focused in project based consulting and staff augmentation, presented at a consortium associated with the Healthcare Information Systems Society, New Orleans, LA.

The technical session entitled "Cross-Platform Development; Target More Platforms and Devices with Less Source Code" focused on the benefits, challenges and frameworks associated with cross-platform development projects. Cross-platform application programming is a concept in software development whereby you write the source code once and it can run on multiple operating systems such as Windows, Mac, Linux, iOS and Android. Cross-platform applications originate from a single codebase which requires a single development skillset, resulting in reduced development and maintenance costs compared to native development/applications to support multiple platforms.

Cross-platform frameworks offer options supporting code and asset sharing/utilization to streamline and reduce the development effort; as well as focused modules for general software development. Using cross-platform development technologies, applications can be developed to support the expanding platforms of interest for the medical device industry in a cost effective and time critical manner.

ABOUT ASHVINS GROUP

The **ASHVINS Group** serves both federal and commercial marketplaces by providing a variety of technology services including: staff augmentation, project management, requirements analysis, specification development, process/systems evaluation, systems design, implementation and integration, application development and verification/validation. Our projects range from technology consultation to Full Life Cycle Application Development. ASHVINS Technology Professionals' support also includes data collection interfaces, data analysis, database development, process automation and computer related systems validation. In addition, the company is skilled in software development, validation and compliance processes for FDA regulated environments (and HIPAA compliant applications).

Areas of ASHVINS' technical expertise include web based systems, Windows operating environments, mobile platforms and wireless technologies. The ASHVINS Group is a Certified Woman Owned Small Business. Visit our web site at www.ashvinsgroup.com for a summary of typical projects.
